

# THE INTERVID

AN ISRAELI-HUNGARIAN BI-NATIONAL PRODUCT COLLABORATION

# INTERVID: THE PRODUCT

WHAT IT IS | WHAT IT DOES | WHY IT'S NEEDED

- Provides an interactive video-conference experience
- Allows the visually-, hearing-, cognitively-, and even linguistically\*-impaired to communicate face-to-face with a person trained to help them (\* like tourists!)
- Can be mounted at locations for the mobility-challenged, as well (i.e. at wheelchair height)
- Allows a small number of centrally located customer service representatives to provide support to special needs passengers at a large number of remote locations (e.g., bus stops) simultaneously
- A cost-effective way for transit providers to comply with accessibility regulations, improve passenger experience, and increase ridership

# INTERVID: THE SYSTEM

## THE BIG PICTURE

- The INTERVID DEVICE is the passenger-facing component of a larger system; it's where the passenger sees and interacts with a support person
- The support person, in the remote center, has more:
  - Support people work on INTERVID-based workstations
  - An INTERVID monitor module provides the integrated screen camera with eye-centric display
  - Headset instead of microphone / speakers of the passenger-side device
  - An additional monitor and control software on a full PC gives the support person the power to choose which INTERVID to interact with
- Passenger-side, customer (transit operator) preference will decide whether the INTERVID should show general information (e.g., real-time bus schedules) or advertising when it's not being used for communications

# INTERVID: THE DEVICE

WHAT IT'S MADE OF | COMPONENTS | TECHNOLOGIES

- Israeli contributions:

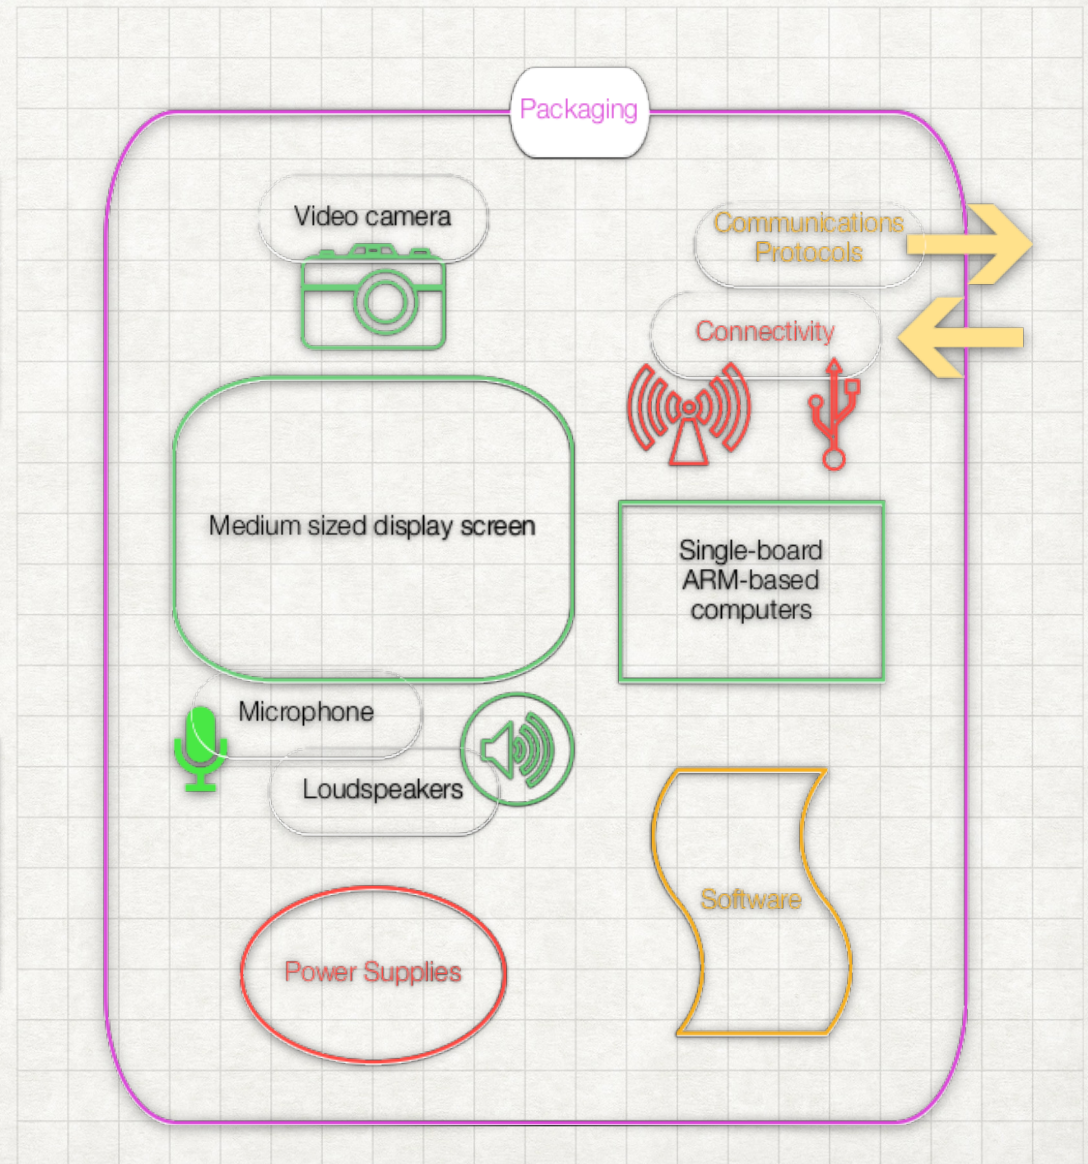

- Overall design
- Software
- Communications protocols

- Off-the-shelf Components

- Hungarian contributions:

- Electronics
- Packaging
- Prototyping / Manufacturing

# THE TEAM

WHO WE ARE | WHAT WE DO

- WeDrive R & D, Ltd. – Jerusalem-based startup in the mobility sector, providing the concept and developing the software
  - Unspecified Israeli partner to contribute accessibility advice and do early usability studies (*discussions w/ 2 possible partners ongoing*)
- PL3 Services, Ltd. – Pécs-based electronics lab coordinating the Hungarian team, building prototypes, develop manufacturing process
  - Engage consultants for – field testing, regulatory approvals, coordination with potential customers
- Budapest University of Technology and Economics (BME) – responsibility for electronics and product hardware design
